

Methodology Asset Formation™ (MAF™) Question Index

**Methodology Asset Formation™ (MAF™) Question Index OOF
Problem Space Intelligence Index™ (PSII™) Transforming Knowledge,
Expertise, Ideas, and Opportunities into Structured Methodology
Assets Organizations, researchers, consultants, innovators,
startups, and industry experts often possess valuable knowledge,**

operational experience, innovative ideas, or market opportunities.

However, valuable knowledge does not automatically become a methodology asset.

Professional methodology assets require structured engineering, governance architecture, operational analysis, canonical definitions, standards, documentation, and long-term consistency.

Methodology Asset Formation™ (MAF™) exists to transform knowledge into structured, protectable, licensable, and scalable methodology assets.

This Question Index™ provides a structured collection of questions designed to support methodology asset creation, methodology engineering, governance architecture development, methodology positioning, and long-term methodological value creation.

The objective is not merely to document knowledge.

The objective is to transform knowledge into a valuable methodology asset.

Knowledge Discovery

What knowledge should be preserved? What expertise creates unique value? What operational experience should be documented? What knowledge is currently undocumented? Can hidden expertise be identified? Does valuable know-how already exist? What problems does the knowledge solve? Can knowledge be transferred? Can knowledge become reusable? Is the knowledge strategically valuable?

Opportunity Identification

What opportunity has been identified? Does the opportunity solve a real problem? Is the opportunity growing? Can the opportunity be structured? Is there unmet market demand? Can the opportunity support a methodology? Does the opportunity create long-term value? Can the opportunity scale? Is the opportunity globally relevant? Should the opportunity become a methodology asset?

Methodology Engineering

Can the knowledge become a methodology? What methodology structure is required? What governance architecture is needed? Which standards should be created? Which modules should be developed? Which operational rules should be defined? Can the methodology be documented? Can the methodology be validated? Can the methodology evolve? Can methodology quality be measured?

Governance Architecture

Which governance architecture supports the methodology? Does the methodology require a new governance space? Can governance boundaries be identified? Are governance responsibilities defined? Can governance dependencies be mapped? Does governance improve methodology quality? Can governance support long-term evolution? Are governance controls required? Can governance be standardized? Is governance architecture complete?

Canonical Definitions

Which concepts require canonical definitions? Are methodology terms clearly defined? Can ambiguity be removed? Are meanings consistent? Can terminology be standardized? Can canonical definitions improve interoperability? Can semantic conflicts be avoided? Are methodology concepts traceable? Does semantic clarity improve adoption? Can definitions evolve over time?

Methodology Asset Development

What makes a methodology an asset? Can the methodology create measurable value? Can the methodology become reusable? Can the methodology be licensed? Can the methodology support future services? Can the methodology support future standards? Can the methodology become strategic IP? Can the methodology support multiple industries? Can methodology maturity be evaluated? Is the methodology ready to become an asset?

Protection and Positioning

Should the methodology be protected? Can ownership be demonstrated? Can the methodology be registered? Can the methodology be licensed? Does the methodology require trademark protection? Can positioning improve methodology value? Can methodology identity be strengthened? Can methodology differentiation be demonstrated? Can protection support commercialization? Is long-term positioning defined?

Commercial Potential

Can the methodology generate revenue? Can consulting services be built around it? Can training programs be developed? Can certification programs be created? Can the methodology become a commercial service? Can the methodology support licensing? Can the methodology attract partners? Can the methodology support future products? Can commercial value be measured? Can the methodology

become a long-term business asset?

Long-Term Evolution

Can the methodology evolve continuously? Can future standards be added? Can future modules be developed? Can governance architectures expand? Can the methodology adapt to AI? Can the methodology support autonomous systems? Can future opportunities emerge? Can methodology knowledge be preserved? Can the methodology remain relevant? Is long-term evolution sustainable?

Methodology Asset Intelligence

What defines a valuable methodology asset? Can methodology assets create competitive advantage? Can methodology assets improve organizational capability? Can methodology assets strengthen governance? Can methodology assets improve decision-making? Can methodology assets support innovation? Can methodology assets become infrastructure? Can methodology assets support future intelligent ecosystems? What is the future of methodology assets? Can methodology assets become part of global methodology infrastructure?

Methodology Asset Formation™ (MAF™)

Methodology Asset Formation™ (MAF™) helps organizations, innovators, researchers, startups, consultants, and domain experts transform knowledge, expertise, ideas, governance opportunities, and operational experience into structured, protectable, licensable, scalable, and long-term methodology assets.

About the OOF Problem Space Intelligence Index™

The OOF Problem Space Intelligence Index™ (PSII™) is a growing collection of structured questions designed to help identify, understand, classify, and investigate problems before searching for solutions.

Questions are organized into categories, clusters, and problem environments to improve clarity, analysis, governance, and decision-making.

The objective is not merely to provide answers.

The objective is to ensure that the right questions are being asked.
