

Methodology Due Diligence™ Question Index

OOF Problem Space Intelligence Index™ (PSII™)

Understanding Methodologies Before Investing, Licensing, Acquiring, Implementing, or Scaling Them

Most organizations evaluate products, technologies, vendors, companies, and investments.

Far fewer evaluate the methodologies behind them.

Methodology Due Diligence™ exists to help organizations understand a methodology before making strategic, operational, governance, investment, licensing, acquisition, implementation, or commercialization decisions.

This Question Index™ provides a structured collection of questions designed to support methodology evaluation, investigation, analysis, and intelligence gathering.

The objective is not to immediately provide answers.

The objective is to ensure the right questions are being asked.

Methodology Existence

Does a methodology actually exist? Is the methodology documented?
Can the methodology be demonstrated? Is the methodology repeatable?
Is the methodology independent from specific individuals? Is the methodology clearly defined? Is the methodology operational or theoretical? Can the methodology be applied consistently? Has the methodology been formally structured? Is there evidence supporting its existence?

Methodology Ownership

Who created the methodology?

Who owns the methodology? Is ownership clearly documented? Has ownership changed over time? Are ownership rights disputed? Can ownership be verified? Are there multiple ownership claims? Does the methodology contain third-party components? Are licensing rights clearly defined? Can ownership continuity be demonstrated?

Methodology Integrity

Is the methodology internally consistent? Are core principles clearly defined? Are there contradictions within the methodology?
Can methodology outputs be reproduced? Are methodology boundaries clearly established? Is the methodology traceable? Does the methodology maintain structural integrity? Can methodology decisions be explained? Is the methodology auditable? Are methodology

assumptions clearly identified?

Methodology Maturity

How mature is the methodology? Has the methodology evolved over time? Are historical versions available? Has the methodology been tested? Has the methodology been implemented successfully? Can maturity be demonstrated through evidence? Has the methodology been independently reviewed? Does the methodology have documented use cases? Has the methodology been refined through operational experience? Is the methodology suitable for scaling?

Methodology Validation

Has the methodology been validated? What evidence supports the methodology? Can outcomes be independently verified? Has the methodology been externally reviewed? Are validation criteria clearly defined? Are validation results documented? Can validation processes be reproduced? Are validation limitations known? Does the methodology rely on assumptions or evidence? Is validation ongoing?

Methodology Scalability

Can the methodology scale? Can it be applied across industries? Can it be applied internationally? Can it support large organizations?

Can it support complex environments? Does scalability create new risks? Can the methodology operate across different technologies? Can the methodology adapt over time? Are scalability limitations documented? Has scalability been demonstrated?

Methodology Risk

What risks are associated with the methodology? Are methodology dependencies known? Does the methodology rely on key individuals? Are operational risks documented? Are governance risks understood? Could the methodology fail under certain conditions? Are failure scenarios identified? Are limitations openly acknowledged? Does the methodology create unintended consequences? How resilient is the methodology?

Methodology Commercialization

Can the methodology be licensed? Can the methodology be commercialized? Does the methodology create measurable value? Is there market demand for the methodology? Can the methodology support multiple use cases? Can it be integrated into existing environments? Does the methodology have competitive advantages? Is differentiation clearly defined? Can value creation be demonstrated? Is commercialization realistic?

Methodology Governance

Who governs the methodology? How are methodology changes managed? Is version control maintained? Are governance processes documented? How are disputes resolved? Is methodology continuity protected? Can governance decisions be audited? Are governance responsibilities defined? Is methodology stewardship established? Can governance integrity be demonstrated?

Methodology Intelligence

What problem does the methodology solve? Why was the methodology created? What makes the methodology different? What assumptions does the methodology rely upon? Which environments benefit most from the methodology? Which environments may not benefit? What dependencies exist?

What opportunities does the methodology create? What future evolution pathways exist? Is the methodology ready for long-term adoption?

Methodology Due Diligence™

Methodology Due Diligence™ helps organizations assess methodology integrity, ownership, maturity, scalability, validation, governance, commercialization potential, and long-term viability before investing, licensing, implementing, acquiring, or scaling methodological assets.

About the OOF Problem Space Intelligence Index™

The OOF Problem Space Intelligence Index™ (PSII™) is a growing collection of structured questions designed to help identify, understand, classify, and investigate problems before searching for solutions.

Questions are organized into categories, clusters, and problem environments to improve clarity, analysis, governance, and decision-making.

The objective is not merely to provide answers.

The objective is to ensure that the right questions are being asked.
