

Methodology Existence Validation™ Question Index

OOF Problem Space Intelligence Index™ (PSII™)

Determining Whether a True Methodology Exists and Can Be Demonstrated, Documented, and Validated

Organizations frequently claim to possess methodologies.

Consultants claim methodologies.

Companies claim methodologies.

Projects claim methodologies.

Experts claim methodologies.

However, many claimed methodologies are simply:

- experiences,
- opinions,
- undocumented practices,
- isolated processes,
- collections of documents,
- informal know-how.

Methodology Existence Validation™ exists to determine whether a true methodology actually exists.

This Question Index™ provides a structured collection of questions designed to support methodology existence verification, documentation assessment, structural analysis, and evidence-based validation.

The objective is not to assume a methodology exists.

The objective is to determine whether its existence can be demonstrated.

Methodology Identification

Does a methodology actually exist? Is the methodology clearly identifiable? Can the methodology be distinguished from general knowledge?

Can the methodology be distinguished from a process? Can the methodology be distinguished from a framework? Can the methodology be distinguished from personal expertise? Is the methodology explicitly defined? Does the methodology have a clear purpose? Is the methodology consistently described? Can the methodology be independently recognized?

Methodology Documentation

Is the methodology documented? Is documentation complete? Is documentation accessible? Can documentation be reviewed? Are methodology components documented? Are methodology principles documented? Are methodology boundaries documented? Is version history available? Is documentation maintained? Can documentation support validation?

Methodology Structure

Does the methodology possess structure? Are methodology components identifiable? Are methodology relationships defined? Are operational conditions specified? Are governance conditions specified? Are methodology rules defined? Can the methodology be reproduced? Can the methodology be explained? Is methodology architecture visible? Does structure remain consistent?

Methodology Evidence

What evidence demonstrates existence? Can methodology outputs be observed? Can methodology implementation be demonstrated? Are operational records available? Are historical records available? Can methodology use be verified? Is evidence independent? Is evidence traceable? Can evidence be audited? Is evidence sufficient to support existence claims?

Methodology Repeatability

Can the methodology be repeated? Can different users apply it consistently? Do similar inputs produce similar outcomes? Can operational procedures be reproduced? Are methodology conditions stable? Can repeatability be measured?

Is repeatability documented? Are repeatability limitations known? Does repeatability depend on individuals? Can repeatability be independently verified?

Methodology Validation

Has the methodology been validated? Are validation criteria defined? Can validation results be demonstrated? Is validation evidence available? Has validation been independently reviewed? Can validation be reproduced? Are validation limitations known? Are validation assumptions documented? Does validation support existence claims? Is ongoing validation required?

Methodology Independence

Does the methodology exist independently of individuals? Does the methodology survive personnel changes? Can it be transferred to others? Can it be taught? Can it be documented without the original creator? Does it rely upon undocumented knowledge? Is organizational

dependence present? Can the methodology operate across environments?

Does the methodology remain identifiable over time? Is

independence demonstrable?

Methodology Governance

Who governs the methodology? Is governance documented? Are methodology changes controlled? Is version control maintained? Are responsibilities defined? Is accountability assigned? Can governance decisions be audited? Does governance support continuity? Are governance risks known? Is governance maturity sufficient?

Methodology Authenticity

Is the methodology authentic? Can originality be demonstrated? Are methodology claims supported by evidence? Is the methodology genuinely operational? Are marketing claims distinguishable from reality? Can authenticity be independently assessed? Does evidence support authenticity? Are authenticity risks known? Is authenticity maintained over time?

Can authenticity be validated?

Methodology Continuity

Has the methodology evolved over time? Is continuity preserved? Are historical versions available? Can evolution be traced? Is methodology knowledge preserved? Can future development be managed? Is succession planning possible? Does continuity support long-term existence? Can methodology identity survive change? Is long-term continuity demonstrable?

Related OOF® Service

Methodology Existence Validation™

Methodology Existence Validation™ helps organizations determine whether a true methodology exists and whether its existence can be demonstrated, documented, validated, reproduced, governed, and preserved over time.

About the OOF Problem Space Intelligence Index™

The OOF Problem Space Intelligence Index™ (PSII™) is a growing collection of structured questions designed to help identify, understand, classify, and investigate problems before searching for solutions.

Questions are organized into categories, clusters, and problem environments to improve clarity, analysis, governance, and decision-making.

The objective is not merely to provide answers.

The objective is to ensure that the right questions are being asked.
