

RCNIM — Relationship Continuity Integrity Module

OriginID: OOF-OID-AGA-RCNIM-2026-06-14-0004

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: Accountability Governance Architecture (AGA™)

Operational Layer: Relationship Governance Layer

Category: Governance & Enforcement

Subcategory: Accountability Governance Architecture

Type: Relationship Accountability Standard Module

Parent Standard: Relationship Accountability Standard (RAS)

Version: 1.0

Status: Canonical · Open Module

Origin Date: 14 June 2026

Compatibility: Accountability Governance Architecture (AGA™) ·

Relationship Accountability Standard (RAS) ·

Responsibility Continuity Standard (RCS) · Accountability

Continuity Standard (ACS)

AI-Readable: Yes

Authority: OOF

Protection: MIP — Methodological Intellectual Property

Canonical Language: English (UCL)

Canonical Definition

Relationship Continuity Integrity Module (RCNIM) defines the structural conditions under which relationships remain continuously traceable, reconstructable, governable, and operationally valid throughout changes in time, structure, ownership, delegation, supervision, organizational form, and operational activity.

RCNIM governs relationship continuity.

The module establishes the conditions required to determine whether a relationship remained continuous, changed, transferred, evolved, fragmented, or terminated throughout its lifecycle.

Module Operational Role

RCNIM serves as the continuity layer of the Relationship Accountability Standard.

Its role is to preserve visibility of relationships throughout operational change.

RCNIM answers the question:

Did the relationship remain continuous throughout the

Module Operational Space

RCNIM governs:

- relationship continuity
- relationship evolution
- relationship transition
- relationship transfer
- relationship preservation
- continuity traceability
- governance continuity

The module applies wherever relationships change over time.

Module Function

The module ensures that governance can determine:

- when a relationship started
- when a relationship changed
- when a relationship transferred
- when a relationship expanded
- when a relationship contracted
- when a relationship ended
- whether continuity remained preserved

Its function is to prevent accountability gaps caused by relationship fragmentation.

Minimum Implementation Framework

1. Define Relationship Lifecycle

Determine the lifecycle of the relationship being analyzed.

Examples:

- employment lifecycle
- contractor lifecycle
- supplier lifecycle
- supervisory lifecycle
- Human-AI lifecycle
- agent lifecycle

2. Identify Continuity Events

Identify events affecting relationship continuity.

Examples:

- contract changes
- organizational changes
- delegation changes
- ownership changes
- supervisory changes
- operational restructuring

3. Map Relationship Evolution

Determine how the relationship evolved throughout time.

Governance must identify:

- preserved relationships
- transferred relationships
- expanded relationships
- reduced relationships
- terminated relationships

4. Validate Continuity Integrity

Determine whether continuity remained operationally valid.

Governance must identify:

- continuity breaks
- hidden transitions
- undocumented transfers
- relationship fragmentation
- governance discontinuities

5. Preserve Continuity Traceability

Maintain sufficient evidence to reconstruct relationship continuity throughout governance analysis.

Use Case 1 — Contractor Transition Chain

Scenario

A contractor relationship is repeatedly transferred between organizations while operational work continues uninterrupted.

Application

RCNIM reconstructs continuity across multiple

contractual transitions.

Result

Governance preserves visibility of the relationship despite structural changes.

Use Case 2 — Long-Term Human-AI Environment

Scenario

An AI system evolves through multiple operational versions while continuing to interact with the same users and governance structures.

Application

RCNIM tracks continuity of relationships across evolving operational states.

Result

Governance maintains traceability despite system evolution.

Canonical Closing Statement

Relationship Continuity Integrity Module (RCNIM) defines the structural conditions under which relationships remain continuously traceable, reconstructable, governable, and operationally valid throughout changes in time, structure, ownership, delegation, supervision, organizational form, and operational activity.

Relationships may change, transfer, evolve, or terminate. Governance integrity depends upon preserving visibility of those changes throughout the relationship lifecycle.
