

ReMonet™ Standard

OOF™ Origin Open Foundation™

Global Methodology Authority

OriginID: OOF-OID-ECO-RMN-2026-01-26-0004

Category: Economic & Value Standards (ECO)

Subcategory: ReMonet™ (RMN)

Version: 1.0

Status: Canonical · Binding

Effective Date: 26 January 2026

Compatibility:

Methodology OS™: Compatible

Authority: OOF™ Origin Open Foundation™

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL™)

B. Standard Abstract

This standard defines ReMonet™ as the governed transition process through which admissible economic value may be reintroduced to an asset previously classified as ZVA™.

It establishes the mandatory validation and integrity conditions required before value activation.

ReMonet™ ensures that value restoration is traceable, justified, and non-manipulative.

C. Canonical Definition

ReMonet™ is defined as the canonical transition process by which admissible economic value is formally reassigned to an asset following ZVA™ state, under governed and validated conditions.

ReMonet™ is the only permitted mechanism for transitioning from ZVA™ to Value Asset state.

D. Base

This standard is based on:

- Deterministic Asset State Architecture
- Non-Skippable Transition Logic
- Traceable Historical Continuity
- Governed Value Recognition
- Integrity Restoration Requirement

Value reactivation must follow documented and validated correction.

E. Purpose & Scope

Purpose

To define the structured mechanism by which economic value may be legitimately restored to an asset after resolution of authenticity, legality, ethical, ecological, or systemic failure.

Scope

Applies to:

- Assets in ZVA™ state
- Digital and AI-derived systems
- Economic instruments
- Certified physical and virtual assets

Does not apply to speculative price increase or market-driven revaluation.

F. Applicability

ReMonet™ applies when:

- identity is verified
- authenticity is restored
- compliance violations are resolved
- ecological or ethical breaches are corrected
- systemic risks are mitigated

All trigger conditions must be documented.

G. Protocol

ReMonet™ transition requires:

1. Verification of corrective action
2. Re-evaluation of authenticity and integrity
3. Compliance confirmation
4. Governance approval
5. Formal value reactivation
6. Asset reclassification to Value Asset

All transition steps must remain permanently traceable.

H. Classification & States

Canonical sequence:

Origin Asset™ → DeMonet™ → ZVA™ → ReMonet™ → Value Asset

ZVA™ cannot transition directly to Value Asset without ReMonet™.

Value injection without ReMonet™ constitutes systemic manipulation.

I. Licensing & Usage

Reference use permitted.

Implementation of ReMonet™ mechanisms requires OOF™ license.

Derivative transition systems require explicit authorization under MIP™.

J. Compatibility & Dependencies

Compatible with:

- Methodology OS™
- ZVA™ Standard
- DeMonet™ Standard
- Value Asset Standard
- MTVF™
- CAP™

ReMonet™ operates as the exclusive transition mechanism from ZVA™ to Value Asset.

K. Non-Compliance Consequences

Assets assigned value without ReMonet™ protocol:

- are non-admissible
 - are invalid within canonical systems
 - cannot be recognized as Value Asset
-

Canonical Closing Statement

ReMonet™ is not recovery by assumption.

It is governed reactivation of value through verified correction.
