

Runtime Integrity Assessment™ (RIA™)

Independent Assessment of Governance Integrity During Real-World Operation

What Is Runtime Integrity Assessment™?

Runtime Integrity Assessment™ (RIA™) is an independent OOF® assessment service that evaluates whether governance integrity is preserved during the real-world operation of AI systems, autonomous systems, digital processes, operational environments, and intelligent infrastructures.

Unlike traditional assessments that primarily evaluate system design, implementation, or technical compliance before deployment, Runtime Integrity Assessment™ evaluates how systems actually operate under real-world conditions.

The objective is not to verify intentions.

The objective is to verify operational reality.

Why This Service Exists

Modern operational systems continuously make decisions, execute workflows, coordinate autonomous behavior, interact with humans, and adapt to changing operational environments.

Even well-designed systems may gradually deviate from their intended governance conditions during operation.

Runtime Integrity Assessment™ exists to determine whether governance integrity remains preserved after deployment.

Core Question

Does the system remain governable, trustworthy, traceable, explainable, and operationally aligned while operating under real-world conditions?

Assessment Scope

Runtime Integrity Assessment™ may be applied to:

- AI Systems
 - Autonomous Agents
 - Multi-Agent Systems
 - Robotics
 - Human-AI Operational Environments
 - Digital Business Processes
-

- Workflow Automation
- Enterprise Operational Platforms
- Critical Infrastructure
- Intelligent Operational Systems

The methodology is applicable wherever governance integrity must be preserved throughout runtime operation.

Assessment Boundaries

Runtime Integrity Assessment™ is not a software certification service.

It does not replace:

- penetration testing,
- cybersecurity assessments,
- software quality assurance,
- functional software testing,
- infrastructure monitoring.

Instead, it evaluates whether governance integrity remains preserved while systems operate under real-world conditions.

Methodology Independence

Runtime Integrity Assessment™ is methodology-driven rather than technology-dependent.

The assessment may be applied across different vendors, software platforms, AI models, operational architectures, and technology environments.

The methodology evaluates governance integrity rather than specific technologies.

How Runtime Integrity Assessment™ Works

Every assessment follows a structured governance evaluation process.

What Runtime Integrity Assessment™ Evaluates

Depending on the operational environment, OOF® may evaluate:

- Runtime Behavior
 - Governance Compliance
 - Operational Integrity
 - Behavioral Drift
 - Decision Consistency
 - Boundary Compliance
 - Exception Handling
 - Escalation Behavior
 - Runtime Evidence
 - Audit Traceability
 - Human Oversight
 - Operational Deviations
-

Assessment Inputs

Typical assessment inputs may include:

- Runtime Logs
 - Decision Records
 - Event History
 - Audit Trails
 - Governance Rules
 - Operational Policies
 - Exception Reports
 - Escalation Records
 - User Interaction Records
 - Incident Reports
-

Assessment Outputs

Runtime Integrity Assessment™ may provide:

- Runtime Integrity Report™
 - Runtime Governance Gap Analysis™
 - Runtime Risk Assessment™
 - Runtime Drift Analysis™
 - Runtime Evidence Review™
 - Runtime Integrity Score™
 - Runtime Trust Assessment™
 - Governance Improvement Roadmap™
-

Relationship to Runtime Integrity Standard™

Runtime Integrity Standard™ (RIS™) defines the governance conditions required for runtime integrity.

Runtime Integrity Assessment™ independently evaluates whether those governance conditions remain preserved during real-world operation.

Organizations may use Runtime Integrity Assessment™ independently or as a structured evaluation aligned with the Runtime Integrity Standard™.

Who May Benefit

- Organizations
 - Government Institutions
 - AI Companies
 - Technology Companies
 - Critical Infrastructure Operators
 - Financial Institutions
 - Healthcare Organizations
 - Manufacturing
 - Robotics Companies
 - Consulting Firms
-

Why Choose Runtime Integrity Assessment™

Organizations benefit from:

- verification of real operational behavior,
- methodology-driven governance evaluation,
- independent runtime integrity assessment,
- early identification of governance deviations,
- evidence-based governance analysis,
- improved operational transparency,
- stronger organizational trust,
- continuous governance improvement.

Runtime Integrity Assessment™ evaluates operational reality rather than assumptions.

Relationship to OOF®

Runtime Integrity Assessment™ builds upon the OOF® governance ecosystem, including Operational Reality Architecture™, Runtime Integrity Standard™, AI Governance Architecture™, Accountability Governance Architecture™, Governance Architecture, and Space Mapping™.

The assessment evaluates operational behavior within the context of structured governance rather than isolated technical events.

Canonical Principle

Architecture defines what should happen.

Runtime Integrity Standard™ defines the governance conditions that must be preserved.

Runtime Integrity Assessment™ verifies what actually happens during real-world operation.

Canonical Closing Statement

Runtime Integrity Assessment™ enables organizations to independently evaluate whether governance integrity is preserved throughout real-world operation. By combining Operational Reality Analysis, Runtime Integrity, Space Mapping™, evidence evaluation, and structured governance methodology, OOF® helps organizations understand how operational systems actually behave, identify governance deviations, and continuously strengthen governance across AI systems, autonomous systems, digital processes, and future intelligent operational environments.
