

Origin Eco™

Minimal Self- Declaration Framework

Framework Type: Implementation Framework

Related Standard: Origin Eco™ Standard

Version: 1.0

Purpose

This framework provides a structured method enabling producers to declare alignment with the Origin Eco™ Standard through transparent disclosure of origin, materials, and production processes.

The objective is to establish visible environmental transparency through producer responsibility.

Implementation Principle

Implementation of the Origin Eco™ Standard at the declaration level operates through **public structural disclosure** of origin, material composition, and production processes.

Responsibility for the declaration remains with the declaring entity.

Declaration Conditions

A product or production process may be declared under the Origin Eco™ Standard when the following information is documented and publicly accessible.

1. Origin Disclosure

The origin of primary materials or resources used in production must be declared.

Examples may include:

- own cultivation or production
- local supplier sourcing
- regional sourcing
- imported materials

Where applicable, geographic origin may be specified.

2. Material Transparency

Primary materials used in the product must be declared.

The declaration should provide visibility of:

- material categories
- natural or synthetic origin
- principal inputs used in production

The objective is structural transparency of material composition.

3. Production Process Transparency

The core production process must be described.

The declaration should include:

- description of production stages
- responsible entity

This ensures visibility and responsibility for production structure.

Responsibility Declaration

The producer publishes a public declaration confirming that the information disclosed reflects the actual production structure.

Example declaration:

“This product is declared under the Origin Eco™ Standard. Origin of materials, material composition, and production process transparency are publicly disclosed under producer responsibility.”

Documentation Requirements

Implementation typically requires:

- one origin disclosure sheet
- one material transparency sheet
- one production process description
- one responsibility declaration

The information should remain publicly accessible.

Structural Benefit

The declaration framework transforms:

implicit environmental claims
into
structurally documented environmental transparency.

This strengthens:

- supply chain clarity
 - customer trust
 - regulatory defensibility
-

- environmental accountability.
-

Closing Principle

Environmental credibility begins with transparent origin.
