

Soil Integrity™ Standard

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-ENV-SI-2026-02-23-0001

Category: Environmental Integrity Standards (ENV)

Subcategory: Soil Integrity™

Version: 1.0

Status: Canonical · Open Standard

Effective Date: 23 February 2026

Authority: OOF™ Origin Open Foundation™

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English

A. Standard Abstract

This standard defines structural transparency conditions for soil-based production systems within the Environmental Integrity Standards architecture.

Soil Integrity™ establishes a transparency model for documenting soil characteristics, fertilization inputs, and plant protection practices.

The standard does not regulate agricultural methods.
It defines structural disclosure conditions for soil-dependent production environments.

B. Canonical Definition

Soil Integrity™ is a structural environmental transparency state in which soil type, fertilization inputs, and plant protection practices are documented and made visible within soil-based production systems.

Soil Integrity™ establishes transparency of production inputs rather than regulatory compliance evaluation.

C. Structural Base

This standard is based on the following principles:

- Input Transparency Principle
- Structural Disclosure Logic
- Responsibility Attribution
- Non-Substitution of Regulatory Authority

Soil Integrity™ defines transparency of soil-based production inputs rather than agricultural regulation.

D. Scope

This standard applies to soil-dependent production systems including:

- agricultural production
- herbal cultivation
- garden-based production
- soil-grown raw materials
- environmental resource-based production systems

This standard does not apply to:

- hydroponic-only production systems unless explicitly declared as such
 - fully synthetic production systems
-

E. Structural Transparency Requirements

Systems referencing [Soil Integrity™](#) must maintain transparent documentation of the following production inputs.

1. Soil Type Disclosure

The soil environment used in production must be identifiable.

Examples include:

- natural soil
 - mixed soil
 - artificial substrate
 - controlled environment soil system
-

2. Fertilization Input Transparency

Use of fertilization inputs must be declared.

Disclosure includes:

- whether fertilization is used
- fertilization category where applicable

Possible categories include:

- animal manure
- plant-based compost
- mineral fertilizer
- synthetic fertilizer
- sewage-derived fertilizer

This standard does not prohibit fertilization inputs.
It requires transparent disclosure.

3. Contamination Risk Transparency

Where fertilization inputs may present potential contamination risks, the source category should be declared.

Examples may include fertilizers derived from sewage or other contamination-prone inputs.

4. Plant Protection Practice Transparency

Use of plant protection substances must be declared.

Disclosure may include:

- whether plant protection substances are used
- substance category
- frequency of application

Examples of frequency categories:

- occasional
 - seasonal
 - regular
-

F. Optional Structural Condition

Natural-Origin Condition

A production system may reference a Natural-Origin condition when synthetic fertilizers and synthetic plant protection substances have not been used for a minimum period of 36 months.

This condition represents a transparency state and does not replace organic certification frameworks.

G. Compatibility

Soil Integrity™ may operate alongside other Environmental Integrity Standards including:

- Origin Eco™ Standard
- Water Integrity™ Standard
- Carbon Lifecycle Integrity™ frameworks

Soil Integrity™ functions as part of the broader **Environmental Integrity Stack**.

H. Licensing & Usage

Reference use of this standard is permitted.

Implementation of Soil Integrity™ within structured commercial ecosystems may require authorization under **MIP™ Methodological Intellectual Property**.

Canonical Closing Statement

Soil-based production integrity begins with transparent disclosure of production inputs.
