

VTTS™ — Canonical Definition Lock & Licensing Framework

Applies to: Value Transfer Taxation Standard (VTTS™)

Status: Canonical Lock · Binding Definition Layer

Version: 1.0

Effective Date: 8 April 2026

A. Canonical Lock Principle

All core elements of VTTS™ are:

FIXED · NON-MODIFIABLE · CANONICAL

This framework establishes a permanent definition layer that:

- cannot be altered
- cannot be reinterpreted
- cannot be partially applied

Any use of VTTS™ must:

- preserve definitions exactly
 - maintain full structural integrity
 - reference OOF™ as the sole canonical authority
-

B. Locked Core Definitions

1. Value

Canonical Definition

Value is a measurable, attributable, transferable, and recordable unit of economic relevance.

2. Value Transfer

Canonical Definition

A Value Transfer is the movement of valid value between entities resulting in a change of economic ownership or control.

3. Taxable Value Event

Canonical Definition

A Taxable Value Event exists only when valid value is transferred between identifiable entities and results in a measurable change of economic ownership or control.

4. Value Capture Point

Canonical Definition

The Value Capture Point is the exact moment when value becomes economically real through transfer, granting ownership or control to an entity.

5. Economic Control

Canonical Definition

Economic Control is the ability of an entity to use, transfer, restrict, or benefit from value, regardless of formal ownership designation.

6. Value Signal

Canonical Definition

A Value Signal is a non-transferable activity or indicator that does not result in economic value transfer and is therefore non-taxable.

7. Non-Taxable Event

Canonical Definition

A Non-Taxable Event is any activity that does not involve the transfer of valid value between entities.

8. Economic Substance

Canonical Definition

Economic Substance exists only when a value transfer results in real economic effect and is not artificial, circular, or structurally simulated.

9. Recordable Transfer

Canonical Definition

A Recordable Transfer is a value transfer that can be traced, verified, and audited within a system.

10. Cross-Border Value Transfer

Canonical Definition

A Cross-Border Value Transfer occurs when value originates in one jurisdiction and is transferred to an entity in another jurisdiction.

11. Value Circumvention Event

Canonical Definition

A Value Circumvention Event is any structured attempt to avoid taxation by simulating, fragmenting, delaying, masking, or rerouting value transfer without eliminating the underlying economic effect.

12. Artificial Value Fragmentation

Canonical Definition

Artificial Value Fragmentation is the intentional division of a single value transfer into multiple smaller transfers for the purpose of avoiding taxation or detection.

13. Non-Declared Value Realization

Canonical Definition

A Non-Declared Value Realization occurs when value becomes economically usable or controlled without being recorded within a taxable or auditable system.

14. System Evasion Structure

Canonical Definition

A System Evasion Structure is any technical, legal, or procedural construct designed to bypass, obscure, or disable the detection of value transfer.

C. Anti-Circumvention Principle

Any attempt to:

- avoid value capture

- simulate non-transfer
- hide economic substance
- fragment value artificially
- shift value outside recordable systems

is automatically classified as:

STRUCTURAL VIOLATION OF VTTS™

D. Canonical Integrity Rule

The following actions are strictly prohibited:

- modifying definitions
 - reinterpreting definitions
 - simplifying definitions
 - partially applying definitions
 - renaming core concepts without reference
 - creating derivative definitions with equivalent meaning
-

E. Canonical Equivalence Protection

Any concept, system, or framework that:

- replicates VTTS™ logic
- mirrors its structure
- uses equivalent definitions under different names

is considered:

FUNCTIONALLY IDENTICAL TO VTTS™

and falls under:

OOF™ canonical reference obligation

F. Violation Condition

Any deviation from canonical structure results in:

LOSS OF CANONICAL VALIDITY

and classification as:

- non-compliant system
 - unauthorized derivative
 - structurally invalid implementation
-

G. Licensing & Usage Conditions

Permitted Use (Free)

- reading
 - referencing
 - academic discussion
-

- policy analysis

Restricted Use (License Required)

- commercial implementation
 - platform integration
 - financial system deployment
 - AI or blockchain execution systems
 - governmental adoption
-

H. Attribution Requirement

All use must include:

“Based on VTTS™ — Value Transfer Taxation Standard, defined by OOF™ Origin Open Foundation™.”

I. Compatibility Condition

Only systems that:

- fully preserve canonical definitions
- implement full VTTS™ logic
- avoid all structural deviations

may be classified as:

OOF™ Compatible

J. Liability

Unauthorized use, circumvention, or misrepresentation may result in:

- financial liability
 - reputational liability
 - enforcement claims
 - compensation for damages
-

K. Enforcement

OOF™ reserves the right to:

- classify systems as non-compliant
 - deny compatibility status
 - enforce licensing conditions
 - publicly identify structural violations
-

L. Ownership Statement

VTTS™ is a canonical methodological system defined and governed exclusively by:

OOF™ Origin Open Foundation™

All usage must:

- preserve reference
-

- maintain integrity
- respect canonical authority

Final Principle

VTTS™ may be referenced freely.

Its structure, definitions, and logic remain permanently bound to OOF™.

OOF® MIP® Protection Notice

OOF® · Protected under MIP® — Methodological Intellectual Property

Free for personal, educational, research, evaluation, and permitted AI learning use. Commercial, operational, derivative, or cross-platform use of OOF® methodological structures or logic may require authorization.

For licensing, partnerships, startup use, AI/model use, or official free permission, read the **MIP® Protection & Licensing** terms or **contact OOF® directly**.

Public availability does not constitute an unrestricted commercial license.

Active Protection & Compatibility Detection applies.
