

Value Transfer Taxation Standard (VTTS)

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-EV-VTTS-2026-04-08-0002

Category: Economic & Value

Subcategory: Value Transfer Governance

Type: Taxation Definition Standard

Version: 3.0

Status: Canonical · Open Standard

Effective Date: 8 April 2026

Compatibility:

OOF™ Methodology OS · Value Transfer Definition Standard (VTDS) ·
Digital Value Interaction Standard (DVIS) · Value Flow Mechanism (VFM™) ·
Audit in Real Time (ART™) · Zero Value Asset (ZVA™) · Origin Asset™ ·
DeMonet™ · ReMonet™ · Value Asset

Authority: OOF™ Origin Open Foundation™

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL™)

A. Standard Abstract

The Value Transfer Taxation Standard (VTTS) defines when taxation applies across all economic systems based strictly on actual value transfer.

This standard establishes a universal taxation condition:

- taxation applies only to real value transfer
- value creation alone is not taxable
- non-transfer activity is excluded
- taxation is triggered at the moment value becomes economically real

VTTS applies across:

- digital systems
- physical economies
- AI-driven environments
- hybrid systems

This standard does not define tax rates or jurisdictions.
It defines when taxation is structurally valid.

B. Canonical Definition

A Taxable Value Event exists only when:

- valid value (VTDS)
- is transferred between identifiable entities
- resulting in a measurable change of economic ownership or control

Taxation applies exclusively to:

Transferred Value with Real Economic Effect

C. Structural Base

This standard is based on:

- Value Qualification Principle (VTDS)
- Value Event Requirement (DVIS)
- Non-Signal Rule
- Transfer-Based Taxation Logic
- Substance Over Structure Principle

Taxation must follow value — not activity, not form, not system representation.

D. Taxation Condition

A value event is taxable only if all conditions are met:

1. Valid Value Exists

The value must be:

- measurable
- attributable
- transferable
- recordable

2. Value Transfer Occurs

- value moves between entities
- economic ownership or control changes

3. Transfer Has Economic Substance

The transfer must represent:

- real economic effect
- actual change in value availability or control

The following are not valid transfers:

- internal accounting entries
- artificial structuring
- circular or self-referential flows

4. Transfer Is Attributable

- source entity identifiable
- destination entity identifiable

5. Transfer Is Recordable

- trace exists within system
- audit is possible

If any condition is not met:
→ NON-TAXABLE EVENT

E. Value Creation vs Transfer Rule

Value creation alone is not taxable.

Taxation applies only when:
created value is transferred
and becomes economically accessible or controlled

F. Non-Taxable Events

The following are not taxable:

- views
- likes
- clicks
- impressions
- attention
- behavioral signals
- non-transferable engagement
- unrealized value states

These are classified as:
Value Signals — not taxable events

G. Value Capture Layer™

Taxation must occur at the moment where value becomes economically real.

A Value Capture Point exists when:

- value becomes accessible for use
- control or ownership is transferred
- value can be realized or claimed

Examples:

- payment execution
- smart contract settlement
- asset transfer
- revenue payout
- withdrawal or realization

Taxation must be triggered at this exact point.

H. Economic Control Definition

Control must be interpreted as:

economic control
not merely formal or legal designation

Taxation applies when an entity gains:

- ability to use value
 - ability to transfer value
 - ability to restrict access to value
-

I. Cross-System Condition

Taxation applies independently of system type.

No distinction is made between:

- digital systems
- physical systems
- AI-generated environments
- hybrid systems

Only relevant condition:

Value movement between entities

J. Cross-Border Condition

A Cross-Border Value Transfer exists when:

- value originates in one jurisdiction
- and is received or controlled in another

Taxation must be based on:

- actual value movement
- traceable origin and destination
- measurable transfer

Non-Valid Taxation Triggers

The following are invalid:

- user location
- platform location
- server location
- interaction volume

Without value transfer:

→ no taxation applies

K. System Boundary Condition

Taxation applies only to value transfers that are:

- recordable
- auditable

If value exists outside recordable systems:

taxation applies only upon entry into a recordable system
or upon measurable realization

L. Value State Compatibility

1. Origin Asset™

initial value

taxable only upon transfer

2. Zero Value Asset (ZVA™)

no value

non-taxable

3. DeMonet™ State

value neutralized

non-taxable

4. ReMonet™ State

value reintroduced

taxable upon transfer

5. Value Asset

active transferable value

taxable upon transfer

M. Structural Rule

Taxation applies only to:

Transferred Value with Economic Substance

Not to:

- potential value
- perceived value
- artificial structures
- non-realized states

N. Methodology

- Identify interaction (DVIS)
- Verify value qualification (VTDS)
- Confirm value creation vs transfer
- Confirm economic substance
- Confirm attribution
- Confirm recordability
- Identify value capture point
- Apply taxation condition

O. Threshold Logic

TAXABLE → valid value transfer with economic substance

NON-TAXABLE → no valid transfer

No partial taxation is permitted.

P. Structural Principle

Tax follows value. Not system. Not time. Not activity. Not form.

Canonical Closing Statement

Economic systems generate continuous activity.

Only value transfer with economic substance creates economic reality.

Value Transfer Taxation Standard (VTTS) establishes a non-negotiable condition:

taxation applies only where real value moves — and at the moment it becomes economically real.
