

Value Asset Standard

OOF™ Origin Open Foundation™

Global Methodology Authority

OriginID: OOF-OID-ECO-VA-2026-01-26-0002

Category: Economic & Value Standards (ECO)

Subcategory: Value Asset (VA)

Version: 1.0

Status: Canonical · Binding

Effective Date: 26 January 2026

Compatibility:

Methodology OS™: Compatible

Authority: OOF™ Origin Open Foundation™

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL™)

B. Standard Abstract

This standard defines Value Asset as a formally recognized asset state in which positive admissible economic value is assigned within a governed system. It establishes the conditions required for lawful value recognition and systemic integration. Value Asset represents a governed activation of value following a validated transition process.

C. Canonical Definition

A **Value Asset** is defined as an asset state in which positive economic value is formally assigned, recognized, and governed under canonical system rules.

Value Asset status may only exist if:

- the asset originates as Origin Asset™, or
- the asset has passed through ZVA™ and ReMonet™ transition.

D. Base

This standard is based on:

- Deterministic Asset State Architecture
- Governed Value Recognition
- Non-Skippable Transition Logic
- Traceable Historical Continuity

Value is not assumed.
Value must be systemically admitted.

E. Purpose & Scope

Purpose

To define the canonical conditions under which an asset may carry positive economic value within a regulated system.

Scope

Applies to:

- financial instruments
- digital assets
- ecological products
- certified systems
- AI-derived outputs

Does not define pricing models or market volatility mechanisms.

F. Applicability

Value Asset classification applies when:

- identity is verified
 - authenticity is validated
 - legality is confirmed
 - ecological compliance is established
 - transition (if required) has occurred
-

G. Protocol

Value recognition requires:

1. Identity validation
2. Integrity verification
3. Compliance confirmation
4. If applicable: ReMonet™ transition
5. Formal value assignment

All steps must be recorded and traceable.

H. Classification & States

Canonical sequence:

Origin Asset™ → DeMonet™ → ZVA™ → ReMonet™ → Value Asset

Value Asset is a governed state.

Direct transition from ZVA™ without ReMonet™ is prohibited.

I. Licensing & Usage

Reference use permitted.

Implementation of Value Asset recognition mechanisms requires OOF™ license.

Derivative value governance systems require authorization under MIP™.

J. Compatibility & Dependencies

Compatible with:

- Methodology OS™
 - ZVA™ Standard
 - DeMonet™ Standard
 - ReMonet™ Standard
 - Canonical Meaning Framework
-

K. Non-Compliance Consequences

Assets improperly assigned value without protocol compliance are non-admissible within canonical systems.

Canonical Closing Statement

Value is not restored by assumption.

Value is activated by governed recognition.
