

Value Governance Framework Standard

OOF™ Origin Open Foundation™

Global Methodology Authority

OriginID: OOF-OID-ECO-VGF-2026-01-26-0006

Category: Economic & Value Standards (ECO)

Subcategory: Value Governance Framework (VGF)

Version: 1.0

Status: Canonical · Binding

Effective Date: 26 January 2026

Compatibility:

Methodology OS™: Compatible

Authority: OOF™ Origin Open Foundation™

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL™)

B. Standard Abstract

This standard defines the governance principles under which economic value may be admitted, withdrawn, or restored within the OOF™ system. It establishes authority boundaries, validation requirements, and traceability conditions for all value-related decisions. The framework prevents arbitrary, political, or non-deterministic manipulation of asset value.

C. Canonical Definition

The **Value Governance Framework (VGF)** is defined as the structural rule set that governs how value states are validated, assigned, removed, and reactivated within the Economic State Architecture.

No value state decision may occur outside this framework.

D. Base

This standard is based on:

- Deterministic Economic State Architecture (ESA)
- Canonical Meaning Framework
- Traceable Decision Authority
- Non-Arbitrary Value Admission
- State-Based Economic Logic

Value governance must be rule-based and auditable.

E. Purpose & Scope

Purpose

To define the conditions under which value-related decisions are considered legitimate within canonical systems.

Scope

Applies to:

- ZVA™ classification
- DeMonet™ execution
- ReMonet™ transitions
- Value Asset recognition
- Economic lifecycle validation

Does not regulate market pricing, speculation, or voluntary exchange dynamics.

F. Applicability

This framework applies to:

- Governance bodies within OOF™ systems
- Licensed operators
- Automated decision systems
- AI-governed evaluation layers

All value-related decisions must be recorded and traceable.

G. Protocol

Value recognition requires:

1. Determinism

Value transitions must follow ESA structure.

2. Traceability

All decisions must preserve historical continuity.

3. Non-Arbitrariness

No discretionary value assignment without defined protocol

4. Integrity Precedence

Authenticity, legality, and ecological compliance override economic interest.

5. Non-Skipable States

No bypass of DeMonet™ or ReMonet™ transitions.

H. Classification & States

Value Governance Framework governs:

- ZVA™ Standard
- DeMonet™ Standard
- ReMonet™ Standard
- Value Asset Standard
- Economic State Architecture Standard

VGF operates as the oversight logic layer of the Economic & Value domain.

I. Licensing & Usage

Reference use permitted.

Operational governance implementation requires OOF™ license.

Derivative governance frameworks replicating deterministic value logic require authorization under MIP™.

J. Compatibility & Dependencies

Compatible with:

- Methodology OS™
- Canonical Meaning Framework
- Economic State Architecture

VGF enforces structural coherence across all Economic & Value Standards.

K. Non-Compliance Consequences

Value decisions made outside the Value Governance Framework:

- are non-admissible
- invalidate affected asset states
- cannot be recognized within canonical systems

Canonical Closing Statement

Value is not governed by opinion.

It is governed by structured and traceable rule sets.
