

Water Integrity™ Standard

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-ENV-WI-2026-02-23-0001

Category: Environmental Integrity Standards (ENV)

Subcategory: Water Integrity™

Version: 1.0

Status: Canonical · Open Standard

Effective Date: 23 February 2026

Authority: OOF™ Origin Open Foundation™

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English

A. Standard Abstract

This standard defines the structural transparency conditions for documenting water sources, declared usage, and responsibility within water-dependent production systems.

Water Integrity™ establishes a framework for **visible water provenance and declared usage transparency** across agricultural, food-related, and production environments.

The standard does not replace existing public health, hygiene, or environmental regulations.
It defines structural conditions for transparent disclosure of water inputs.

B. Canonical Definition

Water Integrity™ is a structural environmental transparency state in which the origin, usage purpose, and declared quality status of water inputs are documented and made visible within water-dependent production systems.

Water Integrity™ establishes **water provenance visibility and responsibility acknowledgment** as a foundational condition of production integrity.

C. Structural Base

This standard is based on the following principles:

- Input Transparency Principle
- Source Disclosure Requirement
- Responsibility Declaration Logic
- Non-Substitution of Regulatory Authority

Water Integrity™ defines transparency of water inputs rather than water quality standards.

D. Scope

This standard applies to water use in:

- irrigation-based agricultural production
- food processing environments
- herbal cultivation
- washing of consumable goods
- water-dependent production systems

This standard does not replace:

- potable water regulations
- hygiene legislation
- environmental compliance requirements

Public law and regulatory frameworks remain fully applicable.

E. Structural Transparency Requirements

Systems claiming Water Integrity™ must maintain transparent documentation of water inputs including the following structural information:

1. Water Source Disclosure

The primary source category of water used in production must be documented.

Examples include:

- municipal supply
- private well
- surface water (river / lake)
- rainwater collection
- mixed sources

If multiple sources are used, each must be identifiable.

2. Intended Use Transparency

Water interaction with production must be clearly defined.

Examples include:

- irrigation
 - washing produce
 - processing use
 - ingredient inclusion
 - cleaning or sanitation
-

The declared use must reflect the real interaction between water and production processes.

3. Declared Water Status

The status of water used in production must be declared.

Possible categories may include:

- municipal regulated potable water
- laboratory tested water
- private source with declared status
- non-potable operational use

The standard defines transparency of declared status, not mandatory testing procedures.

F. Compatibility

Water Integrity™ is compatible with:

- Origin Eco™ Compatibility Standard
- Soil Integrity™ frameworks
- Environmental Integrity Standards ecosystem
- future integrated resource transparency architectures

Water Integrity™ operates as a component of the broader **Environmental Integrity Stack**.

G. Licensing & Usage

Reference use of this standard is permitted.

Implementation of Water Integrity™ within commercial ecosystems may require authorization under **MIP™ Methodological Intellectual Property**.

Canonical Closing Statement

Integrity of water-dependent production begins with transparent disclosure of water origin and use.
