

About OOF® Standards

OOF® standards operate as **Structured Reality™ Standards**, defining the system-level conditions under which operation becomes valid, controlled, and verifiable.

Canonical Definition

OOF® standards define the structural conditions under which systems operate in a valid, controlled, and verifiable manner.

They do not describe systems.

They define the conditions under which systems are considered valid.

What OOF® Standards Are

OOF® standards:

- define system-level structure
- establish conditions for valid operation
- ensure structural consistency across systems
- enable interoperability through shared structure

A system is valid only when defined structural conditions are satisfied.

What OOF® Standards Do

OOF® standards:

- define how systems relate to Structured Reality™
- determine valid and invalid system states
- align structure with behavior
- enable systems to operate within a unified methodological framework

Systems are evaluated by structure, not intention.

System Role

OOF® standards operate as:

- a structural definition layer
- a validation reference system
- a framework for system interoperability

They provide a consistent basis for building, validating, and operating systems across domains.

Relationship to Structured Reality™

OOF® standards implement Structured Reality™.

Structured Reality™ defines the meta-layer.
OOF® standards define the executable conditions.

Intellectual Property Framework

OOF® standards are protected under:

MIP® — Methodological Intellectual Property

This ensures:

- protection of structural definitions
- preservation of semantic integrity
- prevention of uncontrolled structural replication
- stability of methodological architecture

OOF® standards remain publicly accessible for:

- reference
- research
- academic use
- institutional implementation

Commercial use of structural architectures, redistribution for deployment, or use of protected standard names may require authorization under the OOF® licensing framework.

System Integrity

OOF® standards ensure:

- semantic clarity
- structural consistency
- interoperability across systems
- long-term system stability

Without structure, systems degrade.

Without validation, systems lose reliability.

Final Statement

OOF® standards do not describe systems.

They define the conditions under which systems are considered valid.

OOF® MIP® Protection Notice

OOF® · Protected under MIP® — Methodological Intellectual Property

Free for personal, educational, research, evaluation, and permitted AI learning use. Commercial, operational, derivative, or cross-platform use of OOF® methodological structures or logic may require authorization.

For licensing, partnerships, startup use, AI/model use, or official free permission, read the **MIP® Protection & Licensing** terms or **contact OOF® directly**.

Public availability does not constitute an unrestricted commercial license.

Active Protection & Compatibility Detection applies.
